

Raptool

Mobile solutions for system suppliers

Mobile Application, Rapid Development

- The fastest way to make mobile applications
- Integration interface to other systems
- On and Off-Line capability

Mobile solutions for System Suppliers

Enterprise Mobility, solution or problem?

Professional mobile solutions save money and make life easier in warehouses, retail and many other fields. As a system supplier, developing your own mobile solution can be difficult. Even if you find the time to make a mobile solution that works for some of your customers, keeping it alive can be a hassle with the constant changes in customer needs, new hardware and operating systems. Most customers need a tailored solution to fit their specific needs, forcing you to change your solution for new customers. Raptool is a new, revolutionary way to make mobile applications. In our graphical design-interface we make applications for you in record time. You can also download the Designer and make your own applications. Our goal is to provide the fastest way to make mobile applications.

Let's do mobility together!

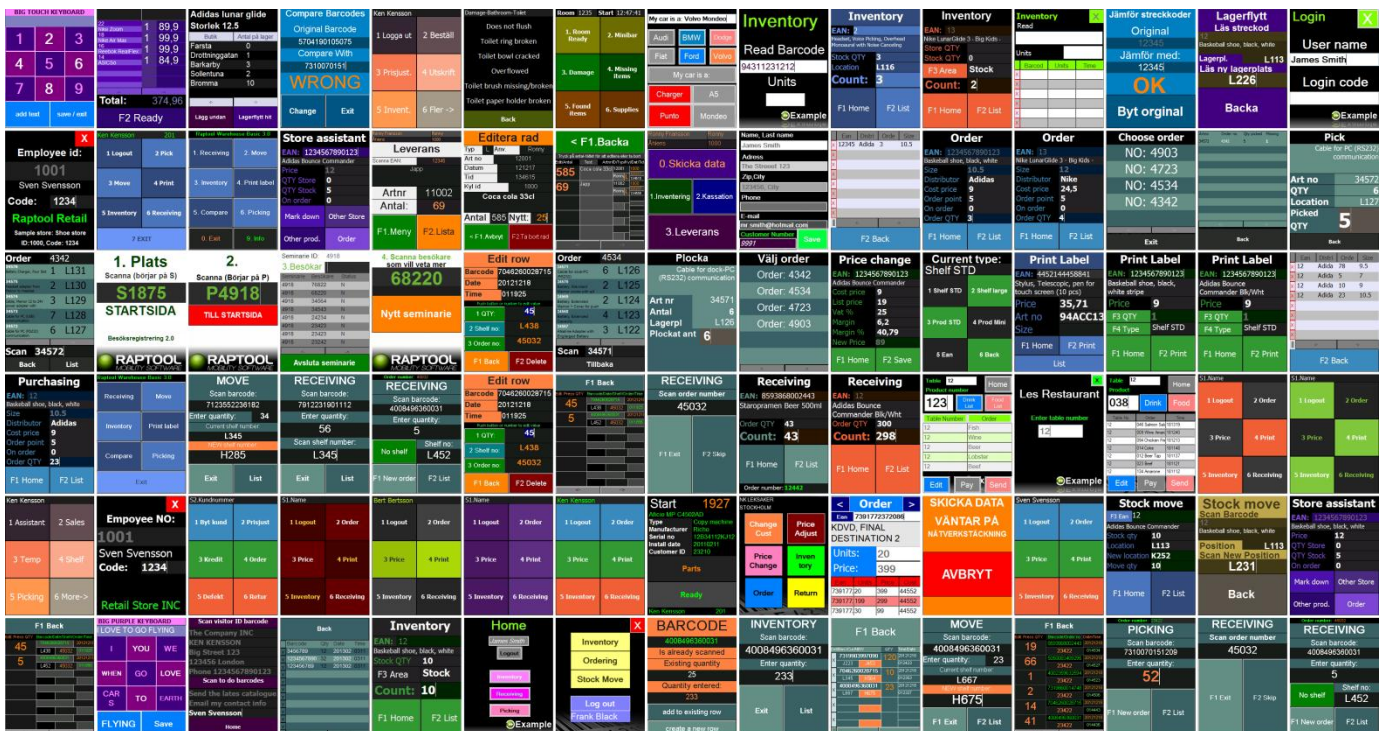

We can help you with your mobile solutions so you can focus on your core business. **Mobile software solutions are our only business.** You know your system and customer needs, we know mobility. We know how a mobile solution should look to be user friendly and what type of devices work in different environments. Tell us where you see the needs and we make the solution together.

You can make money by selling the mobile software through your own sales channels. If you don't want to sell the hardware yourself, we have partners that specialize in this.

Raptool Ready To GO solutions

These Raptool applications are ready to install in a mobile device. Modify them in the Raptool Designer or use them as they are. There are complete solutions for Retail, Warehousing, Service Technicians, Hotel Cleaning and many more fields. Choose from hundreds of applications.

Web or application?

Many companies today are looking at Web applications. In an office with good network connection they work great. But mobile users work everywhere. It can be difficult to get Wi-Fi or mobile coverage in basements, warehouses or on the road. In a web application, no connection means the user cannot work.

Raptool is a thick application that can communicate online but has offline handling.

Many workers use their mobile solution all the time, as a work tool. The response and load time can many times be a few seconds in a web-application. Waiting for a second every time you scan a barcode or push a button is frustrating. Making sure that the user like working with the solution is one of the most important success factors in a mobile project. **Some Raptool users scan over 5 barcodes per second.**

The Raptool Software Suite

The Raptool Designer

The easy-to-use, PC-based designer lets you make mobile applications in minutes. By clicking on icons you add the functions that create your mobile application. No programming skills are required. Anyone can learn how to make their own applications, securing that your mobile solution can be developed further in the future. Our goal is to provide the fastest way to make mobile applications.

The Raptool Communicator

The main task for the Communicator is to send and receive data between the mobile devices and your other systems. It also sends Designs Files and upgrades the Raptool Clients in the mobile devices. The Communicator can communicate through Wi-Fi, 3G, 4G, Ethernet or USB.

The Raptool Mobile Client

The Raptool Client is an application that you install on your mobile devices. It can use Web-service to communicate. This way you get the fast response-time of an application AND you can save and search for data on-line directly in your existing systems like WMS, ERP, POS etc. If you go out of wireless coverage you can work off-line and save data to the SQL-databases in the mobile device. If you don't want wireless communication you can work fully off-line and communicate through docking to USB or Ethernet.

Integration

Integration is easy with Raptool. We do a web-meeting and discuss the best way to integrate Raptool to your specific system. Use simple text-files with any delimiter (Semicolon, Tab, Pipe etc.) or web-service. With our web-service we read and write directly in to most systems using their specific rules for each function.

Raptool target markets

RETAIL

- Store logistics
- Store sales
- Self-scanning

HEALTHCARE

- Hospital warehouses
- Medical Laboratories
- Patient scanning

INDUSTRIAL

- Warehousing
- Manufacturing
- Traceability

HOSPITALITY

- Tradeshow solutions
- Entry/ticket control
- Exhibitor, visitor scanning

FIELD FORCE

- Service technicians
- Mobile sales
- Security guards
- Parcel delivery

SERVICES

- Facility management
- Cleaning services
- Restaurant order taking
- Bar inventory counting
